\*\*\* Official Cup Race and Time Trial “Off the track weight” will include the driver in the car at weigh in for Stock, Improved, Prepared Level and V Class Cars. This “Off the track weight” is calculated by taking the vehicle weight on your Vehicle Classification Sheet for V Class or Prepared weight. Add 180lbs for the POC average driver’s weight minus the stock fuel tank capacity for your car times 6.2 lbs/gal. (see 28.0 of the GCR’s for fuel tank capacity). See example below for a 1980 911 SC in Prepared Class:

POC Vehicle Wt 2611 lbs + POC Driver Wt 180 lbs – Stock fuel Wt (-) 131\*lbs = Total “Off the track weight” 2660 lbs.

\*Fuel tank capacity = 21.1 gal. X 6.2 lbs/gal = 131 lbs.

**POC STOCK/IMPROVED Class Off-Track weight;**

**Off-Track Weight is calculated as = Curb Weight (from 29.0 chart) + Avg POC Driver weight (180lbs) - Fuel weight - weight of spare and tools (45lbs).**

**We allow removal of tools and spare (45lb). Standard driver weight is set as 180 lbs. Using 911SC IS Class example, we have;**

**Off-Track weight = 2756 + 180 - 21.1gal x 6.2 lb/gal - 45lb = 2756 + 180 - 131 - 45 = 2760 lbs**
